

Consolidation of the Trouble Ticket Experience

[\[Overview for LTC: \]](#) [\[Why the change \]](#) [\[Industry standards for service impacting issue: \]](#) [\[Overview of changes \]](#) [\[High level changes required \]](#) [\[Details & ownership \]](#)

Overview for LTC:

- All trouble tickets will be created as cases
- The term “trouble ticket” will be removed from customer facing experiences, everything will be a case filed in the Support Center

Why the change

Users today who need to get help from Equinix on an issue need to file a “trouble ticket”, or a “support case” and often find it confusing determining what option to pick.

- *"Hate your customer interface, trouble ticket should be easier to find."* – Nasdaq
- *"Your ticketing process is very convoluted. Need simplification."* – Fiserv Solutions, Inc
- *"You need a degree in Equinix portal to use it – please simplify ticket submission."* – RBC Capital Markets LLC
- *"The flow of opening a ticket feels entirely too clunky."* – The Private Bank and Trust Company
- *"Extremely confusing ticket creation..."* – Gide Loyrette Nouel A.A.R.P.I.

Confusion is compounded by the fact that trouble tickets create a case (for digital products) and create an order for colocation products. These then need to be managed from two separate areas of the ECP. The Lead to Cash initiative presents us with an opportunity to simplify the experience for our customers by converging on case, and move to be more in line with what users expect.

Industry standards for service impacting issue:

▼ Review of terminology used in industry for help with service impacting issues

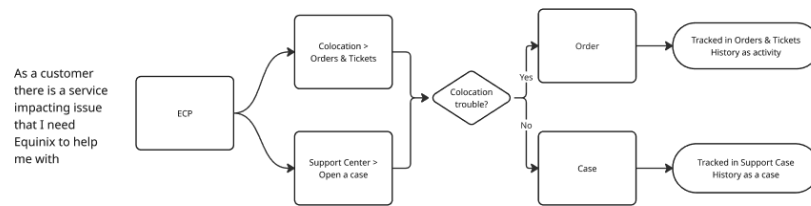

Company	Terms Used in Portals	Highest severity level	Typical Scope (per Docs)	Source
---------	-----------------------	------------------------	--------------------------	--------

Equinix	Trouble Ticket (for service-impacting) and Support Case (general)	Severity 1 / Critical	Open a Trouble Ticket for critical incidents; Open a Support Case for all other needs on ECP.	Opening a Support Case Equinix Product Documentation
Digital Realty (incl. Interxion)	Customer Support Ticket	Severity 1 / Critical	Portal/API consistently uses Support Ticket, not Trouble Ticket.	How to Guide Digital Realty
CyrusOne	Tickets / Service Requests	Severity 1 / Critical	Portal and docs emphasize Tickets and Service Requests.	Home CyrusOne
QTS Data Centers	Tickets (via ServiceNow)	Severity 1 / Critical	Uses ServiceNow; Trouble not used.	QTS Home
Matterport	Support Request / Ticket	N/A	Support Requests submitted by filing a ticket via the Platform.	Support Community
CoreSite	Trouble Ticket	Severity 1 / Critical	For emergencies like outages; distinct from Remote Hands.	https://mycoresite.com

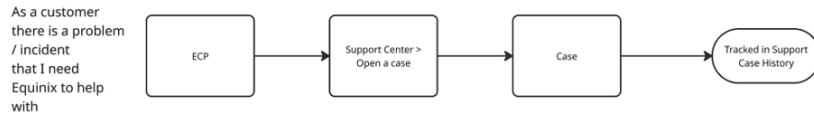

AWS	Support Case	Production system down (Sev 1)	Case is universal term; mapped by plan.	[ AWS Support]( AWS Support)
Google Cloud	Support Case	P1 – Urgent	P1 = production-impacting, 24/7 response.	[ Customer Care Google Cloud]( Customer Care Google Cloud)
Microsoft Azure	Support Request (Ticket)	Severity A – Critical	Support request is default terminology.	[ Azure Support Options Microsoft Azure]( Azure Support Options Microsoft Azure)
Cloudflare	Support Ticket	P1 – Urgent (Critical impact)	Enterprise SLA defines P1.	[ Cloudflare Customer Support]( Cloudflare Customer Support)
Akamai	Support Case	Severity 1 – Critical	UI and navigation reference Cases.	[ Control Center]( Control Center)
Fastly	Support Ticket	P0 – Urgent (Critical)	Uses P0–P2 scale; P0 = most critical.	[ Fastly Support]( Fastly Support)
DigitalOcean	Support Ticket / Request	No public scale	Mission-critical	

Overview of changes

Current Experience

New Experience

High level changes required

- Removal of customer facing trouble ticket terminology
- One trouble ticket submission experience only, in Support Center
- Orders & Tickets
 - Changed to just Orders
 - If a trouble ticket is customer caused, billable components will remain as an order, called “Billable Case” and are linked to the case that will live in the Support Center
- Smart hands trouble ticket CTA's link to new experience
- Support Center: Trouble tickets will appear here as a Support case

Details & ownership

Area	Item	Details	Owner(s)	Committed (Y/N)	Jira link
Orders & Tickets	Rename “Orders & Tickets History” to just “Orders” in nav	On main ECP left nav bar to just “Orders”			
		On Colocation top nav to just “Orders”			
	Redirect old Trouble ticket submission flow	If a LTC customer lands on the old trouble ticket submission page https://uatportal.equinix.com/ecp/ordersui/troubleticket (bookmarked, or via public docs) redirect them to the Support Submission page https://uatportal.equinix.com/support			
	Orders & Tickets dropdown menu	Converge the multiple menu options into one tile Title: Support Case. Description: Submit a ticket for any issue, including IBX support for equipment,			

power, and environmental problems.

Trouble Ticket
Submit a ticket to IBX and resolve issues related to equipment, network power or environment failure

NEW

Trouble Ticket/Support Case
Open a trouble ticket or support case for selected products or services

^ Converge to one option with copy shown below

Change management notification banner “Looking for trouble tickets” at the top of Orders & Tickets history [Figma link](#)

Order History Table

[Figma link](#)

Note: While trouble tickets will be created as a case, if it is customer caused an order will be created and linked to the case.

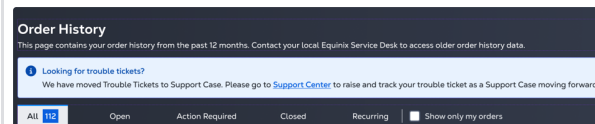

Orders & Tickets History will be called orders.

Orders & Tickets header description copy change to remove trouble ticket reference, guide user to new experience.

Current:

“This page contains your order history from the past 12 months. Contact your local Equinix Service Desk to access older order history data. To find a Network Product Case or Ticket, please visit your Support Case History.”

New

Ensure that billable orders created from cases that are customer caused, are now called “Billable Case”, and appear in the Order History table

Filter option on Order History “Product/Ticket Type” changes to just “Product Type”.

Filter logic on Order History table updated to filter on the Billable Order created from a case instead of Trouble Ticket. Note: Billable order will only be created if the issue is customer caused.

Replace “Trouble Services” filter option with “Billable Case”, adjust logic to filter on the Billable Orders that will exist in the system (if created).

		Notification banner on Orders & Tickets that makes it clear TT term is gone: "We have moved Trouble Tickets to Support Case. Please go to the Support Center to raise and track your Trouble Ticket as a case moving forward."			
	Order details Figma link <i>Note: While trouble tickets will be created as a case, if it is customer caused an order will be created and linked to the case.</i>	When viewing an order created from a case, include Support case number in the header of the billable order			
		Billable order title on order detail page: "Billable Case - [Product Area]"			
		Activity timeline in order details to include an event where the billable order was created from a case.			
		Grey out modify order and cancel order for Billable Case orders. Billable order will happen when the case is closed after IBX has resolved post 24 hrs			
Smart Hands	Smart Hands Catalog	Under the Equipment tile, Smart hands power cycle equipment option directs to Support Center with power pre-selected	@Amit Kumar Agrawal		
		Under the More Services tile, Service Impacting - Trouble Ticket changes to Service Impacting - Support Case	@Rashmi Raja		
Order PDS Permissions page	Update copy to change terminology from "Trouble Ticket" to case	Ordering tile changes to: Ordering & IBX Support. Sub-text changes to: You can place orders & manage IBX cases on the Equinix Customer Portal.	Venkatesh L		
		Ordering PDS permission table has a column for trouble ticket permission. Change naming from Trouble Ticket to Support Case • Info box that appears on hover changes to: This permission allows the user to create a service impacting Support case.	Venkatesh L		
	Map PDS permission to Support case instead of order	Ensure PDS permissions for creating trouble tickets remaps to Support case instead of order	Venkatesh L		
Support Center	Open a Support Case	Open a Trouble Ticket or Support Case changed to Open a Support Case Figma Link	@Amit Kumar Agrawal		
		"Trouble Ticket - Colocation" section changed to "Colocation" in the dropdown menu when selecting	@Amit Kumar		

	a case Figma Link	Agrawal		
	Call me from cage option maps to case			
View a support case	Additional details added to case details header Figma link 1. Cage/Cabinet details a. Add cage/cabinet information at the top header next to order number 2. Current title of case in Support Case detail view is “Support Case: - Incident”, change to include product type “Support Case: [Product Type]”	@Amit Kumar Agrawal		
	Link billable order to support case, in event that issue is customer caused a billable order will be created.	@Amit Kumar Agrawal with support from @Unna Subrama nian		
	Case details tab additional information added: • Call me from cage (Y/N) • Add cage/cabinet information in case details tab underneath the IBX row • Category = Product • Expose customer reference information if filled	@Amit Kumar Agrawal		
	Case detail formatting, change additional details section from unstructured to structured layout Figma link	@Amit Kumar Agrawal		
View a support case > Activity timeline	Includes IBX technician note Figma Link	@Amit Kumar Agrawal		
	Show that a Billable order has been created from a Support case. Figma link	@Amit Kumar Agrawal		
Case submitted page	Figma link 1. Show Support ticket number instead of order number 2. “Track in Trouble Ticket History” changed to “Track in Support Case History” 3. CSAT case submitted survey is maintained	@Amit Kumar Agrawal		

	Support ticket history	1. Add Colocation products to the list of filterable product options 2. Trouble ticket case # can be searched for 3. Category column in list view displays “Trouble Ticket” for all trouble tickets a. Display both high level type (Trouble ticket) and Product as subtype 4. Link to order in support history view	@Amit Kumar Agrawal		
	Contacts	1. Ability to add an unlisted contact to ticket 2. Ability to add technical contact to the ticket 3. Ability to add notification contact to the ticket 4. Ability for all to be shown in the contacts tab	@Amit Kumar Agrawal		

Notes

- 70%+ of trouble tickets end up getting a billable order associated (customer caused)

Success criteria:

- CSAT case submission should remain stable, and increase by 5 percentage points after users adopt to change (1 quarter post launch)
