Q&As

Order Header

1. **referenceId** from OrderHeader, is this referenceId can be a random uuid? it works as long as lineItems and relationshipItems referenceId matches it? ✓

Ans: Always hardcode to "refOrder"

2. What are the available attributes **method**? For accessories order creation, should input "POST" all the time? ✓

Ans: Always hardcode to "POST" for order creation

3. Can these fields be optional? Where to get the source since it is not part of eligibility, product and pricing api response?

initialTerms, renewalTerms, piNoticePeriod, isMaxPriceIncrease, maxPriceIncrease, piPriceIncrease, powerPriceIncrease, servicePriceIncrease, diPriceIncrease, spacePriceIncrease, otherProductsPriceIncrease, renewalNoticePeriod ✓

Ans: It is optional in latest version of contract

4. What should be the value of **salesChannel**? if order creation happens in ECP, should it be "ECP"?

5. For order creation, we need to send "New" for **oderType** at all time?

6. Should **customerRequestDate** be optional as ECP does not provide this info to Siebel as of now? On ECP UI, there is no user input for customer request date. Or it can be default to today's date?

7. Why is **billingAddressId** and **shippingAddressId** is required since account MDM id is provided?

8. What are the acceptable values for **attachments.type**? Does it accepts any value as String?

Order Line Item

1. What **referenceId** is referring to? The input of referenceId is not straight forward, can the API take care of this?

Ans: Always hardcode to "refOIAccessories" for accessories parent line item, "refOI<AccessoriesItem>" for the actual accessories elements

2. Can these fields be optional? Info not available in pricing API.

nonRecurringCharges, monthlyRecurringCharges, cumulativeNonRecurringCharges, cumulativeMonthlyRecurringCharges, listPrice, unitPrice

Ans: In latest contract, these fields are optional except **listPrice** and **unitPrice**

3. **listPrice** and **unitPrice** is not found in pricing API, how can this info retrievable?

4. For attributeItems, what should we input for **referenceId**?

Ans: Always hardcode to "refOIA<AttributeName>"

5. Since **attributeItems.record.orderItemId** value has to be

`"@{refOIAccessories.id}"`, can the API to accept a more direct value to allow the linkage?

6. For **attributePicklistValueId, attributeName, attributeValue** and **attributeDefinitionId**, which response field should be mapping info from Get Product Details API?

Ans: In latest contract **attributeValue** is optional, **attributePicklistValueId** and **attributeName** are retrievable from get product details api but **attributeDefinitionId** is not found in pricing api response.

7. What is **product2Id**? where can we get this when we want to place accessory? We are calling /eligibility api which return an 'id' is this product2Id?

Ans: **product2Id** of the parent line item shall refer to the product id from Get Product Details API, while the **product2Id** of the accessories item shall refer to the id of eligibility API ✓

8. Will **productId** always the same value for accessories? Can ECP hardcode the same value while creating order?

Order Relationship Items

1. What **referenceId** is referring to? Does it has to match the referenceId in order header?

Ans: Always hardcode to "refOIRAccessoriessto<AccessoriesItem>"

2. Does **mainOrderItemId** referring to the **orderLineItem.lineItems.referenceId** of the line item from the same payload?

Ans: Refer to `"@{ref0IAccessories.id}"`

3. Need more clarifications on these fields **associatedOrderItemId**, **associatedOrderItemPricing**, **associatedQuantScaleMethod**, where can these info can be retrieved?

Ans: for **associatedOrderItemId**, refer to `"@{ref0I<AccessoriesItem>.id}"`, **associatedOrderItemPricing**, **associatedQuantScaleMethod** are optional in latest contract.

General

1. There is no purchase order input for create order payload, how can PO information can be sent to SFDC?
2. For order relationship item, will there be any api to provide the relationship info?
